

MailTrace case file

id 73e3f019 SP00F score 66
Evidence file: 08_campaign_twin.eml
Evidence size: 676 bytes
SHA-256: bf8848a150d1c219f60c4e9f08a2d4d469abcddb7b12aa547ca1586799e74675
Raw evidence stored: yes
Evidence storage key: bf8848a150d1c219f60c4e9f08a2d4d469abcddb7b12aa547ca1586799e74675.eml

Sender and header evidence

Subject: Shared campaign B
From: Campaign Desk <followup@mail-secure.net>
Reply-To: camp@mail-secure.net
Return-Path: <camp@mail-secure.net>
Message-ID: <cloud-008@mail-secure.net>
From/Reply-To alignment: aligned
From/Return-Path alignment: aligned
Overall alignment: aligned

Authentication evidence

Header SPF: fail
Header DKIM: none
Header DMARC: fail
Authentication source: message-header
Verification mode: header-stated
Independent DKIM crypto: no
Live DNS enabled: unknown
Live SPF published: unknown
Live DMARC published: unknown
Live hop in SPF record: unknown
Live SPF TXT: unknown
Live DMARC TXT: unknown
Raw authentication headers: Authentication-Results: mx.google.com; spf=fail
smtp.mailfrom=mail-secure.net; dkim=none; dmarc=fail

URLs and attachments

URL: none extracted
Attachment: none; metadata-only handling, never executed

Detection and origin

Method: deterministic-rule-fusion
Forensic score: unknown
NLP label/points: None / None
Model status: not-configured
Probability: unknown

Qwen analyst assist

Assist status: available
Assist provider: groq
Assist model: qwen/qwen3.8-27b
Assist validated: no
Assist threat types: spoofing
Observation: SPF a
Observation: DMARC
Observation: The d
Observation: The f
Observation: The e
Recommended action: Quar
Recommended action: Bloc
Recommended action: Inve
Recommended action: Aler

Analyst note: The email exhibits strong indicators of spoofing, including SPF and DMARC failures, a young domain, and a cloud-based origin. The body text suggests it may be part of a larger campaign. No malicious links or attachments were detected, but the authentication failures are sufficient to classify this as a spoofing threat.

Advisory Qwen output; not a validated classifier and not the deterministic score.

Signal +22 [spf_fail] SPF fail. This server is not allowed to send as the claimed domain. (source: message-header)

Signal +12 [dmarc_fail] DMARC fail. (source: message-header)

Signal +14 [young_domain] Young domain in offline cache: mail-secure.net (source: offline-cache)

Signal +10 [cloud_origin] First public hop is AWS, Frankfurt — cloud, not campus mail. (source: Received header + offline-cache)

Probable earliest observed public hop: 18.184.10.20 | Frankfurt | AWS | cloud | offline-demo-table

Origin interpretation: hosting/infrastructure context; not a person's GPS or identity

Hop 0: 8.8.8.8 | unknown | public-dns | offline-demo-table | from mx.google.com (mx.google.com [8.8.8.8]) by mailbox.pec.edu.in with ESMTPS id h8a

Hop 1: 18.184.10.20 | Frankfurt | AWS | offline-demo-table | from
ec2-18-184.eu-central-1.compute.amazonaws.com (ec2-18-184.eu-central-1.compute.amazonaws.com
[18.184.10.20]) by mx.google.com with ESMTPS id h8b

Campaign candidate

Shared indicators form a campaign candidate; they do not prove common control, identity, or responsibility.

Relationship: da1a7940 -- 73e3f019 | domain: mail-secure.net + same hop: 18.184.10.20 + Reply-To: camp@mail-secure.net | strength=strong | shared=dom:mail-secure.net, ip:18.184.10.20, rt:camp@mail-secure.net

Provenance and uncertainty

Provenance input: local-upload

Provenance parser: Python email BytesParser

Provenance hash_algorithm: SHA-256

Uncertainty: Deterministic rule fusion is an explainable risk indicator, not a probability or accuracy percentage.

Uncertainty: Authentication results are stated in the .eml headers; no live DNS or independent cryptographic verification.

Uncertainty: Origin and campaign relationships describe observed infrastructure and shared indicators, not human identity.

Retention: caller-configured; no default retention period

Custody event: received | local-demo | 2026-09-02T19:37:12.612283+00:00

Custody event: hashed | local-demo | 2026-09-02T19:37:12.612283+00:00

Custody event: stored | local-demo | 2026-09-02T19:37:12.612283+00:00

SHA-256 is an integrity fingerprint. This local prototype trace is not legal-grade chain of custody, a public blockchain, or human attribution. Live DNS reads published SPF/DMARC TXT records; it does not verify DKIM signatures.
