

MailTrace case file

id.73e3f019 SP00F score.66
Evidence file; 08_campaign_twin.eml
Evidence 8f6848a150d1c219f60c4e9f08a2d4d469abcddb7b12aa547ca1586799e74675
SHA-256: 8f6848a150d1c219f60c4e9f08a2d4d469abcddb7b12aa547ca1586799e74675
Evidence storage key: 8f6848a150d1c219f60c4e9f08a2d4d469abcddb7b12aa547ca1586799e74675.eml

Sender and header evidence

Subject: Shared campaign B
Reply-To: camp@mail-secure.net <followup@mail-secure.net>
Return-Path: camp@mail-secure.net <followup@mail-secure.net>
Message-ID: <73e3f019-8f6848a150d1c219f60c4e9f08a2d4d469abcddb7b12aa547ca1586799e74675>
From: Return-Path: camp@mail-secure.net
Overall alignment: aligned

Authentication evidence

SPF: fail
DMARC: none
Authentication source: message header
Authentication mode: header located
Raw authentication headers: none
smtp.mailfrom=mail-secure.net; dkim=none; dmarc=fail

URLs and attachments

URL: none extracted
Attachment: none; metadata-only handling, never executed

Detection and origin

Method: deterministic-rule-fusion
Model status: not configured
Probability: unknown

Qwen analyst assist

Assist status: available
Assist model: qwen/qwen3.8-27b
Assist validated: no
Observation: Spoofing types: spoofing
Observation: DMARC
Observation: The e
Observation: The e
Recommended action: Quar
Recommended action: N/A
Analyst note: The email exhibits strong indicators of spoofing, including SPF and DMARC failures, a young domain, and a cloud-based origin. The body text suggests it may be part of a larger campaign, no
this as a spoofing threat.
Signal 1: [SPF fail] SPF fail. This server is not allowed to send as the claimed domain. (source: message header)
Signal 2: [DMARC fail] DMARC fail. (source: message header)
Signal 3: [Cloud origin] First public hop is AWS, Frankfurt — cloud, not campus mail. (source: Received header + offline-cache)
Probable interpretation: observed public hop: 18.184.10.20 | Frankfurt | AWS | cloud identity
hop 18.184.10.20 | unknown type | dns | from mx.google.com (mx.google.com [18.8.8.8]) by
ec2-18-184-10-20-central-1-compute-1.amazonaws.com [18.184.10.20] by mx.google.com with ESMTPS id h8b

Campaign candidate

Shared indicators form a campaign candidate; they do not prove common control, identity, or responsibility.
Relationship: data7940 | id.73e3f019 | domain: mail-secure.net + same hop: 18.184.10.20 + Reply-To: rt:camp@mail-secure.net | strength=strong | shared=dom:mail-secure.net, ip:18.184.10.20,

Provenance and uncertainty

Provenance input: local-upload
Provenance hash algorithm: SHA-256
Uncertainty: Deterministic rule fusion is an explainable risk indicator, not a probability or accuracy percentage. Authentication results are stated in the .eml headers; no live DNS or independent cryptographic verification.
Uncertainty: Origin and campaign relationships describe observed infrastructure and shared indicators, but they are not definitive.
Retentive caller configured: no default retention period
Custody event: hashed | local-demo | 2026-09-02T19:37:12.612283+00:00
Custody event: hashed | local-demo | 2026-09-02T19:37:12.612283+00:00
public blockchain, live SPI/DKIM/DMARC verification, or human audit log.
